OPERATIONS MANAGEMENT AND FIELD DEVELOPMENT ADVISORY SUPPORT

UKCS, SNS

CLIENT: Confidential

START DATE: January 2020

END DATE: Ongoing

CHALLENGE

Our client, an established non-operated partner in the UKCS, wished to work towards taking on operatorship of field development projects and to assist an existing operating partner in the development of a subsea tie-back project in the Central North Sea.

SOLUTION

Telos developed an Operations Management System to fulfil the clients and the regulators needs and are presently developing the associated detailed procedures and systems.

Through being an integral part of the clients development team, we have continued to assist the client and the operator to develop a robust project that is acceptable to the JV with a view to achieving project sanction in 2022

APPROACH

Telos reviewed the existing management systems and processes and mapped out an operating management system structure for the client before developing detailed procedures from management through to asset level.

Acting as an integral part of the clients development team, Telos reviewed the operators proposals for field development and highlighted areas of concern and suggested improvements in the execution of the project.

OUTCOME

Both the development of the Operations Management System and the project delivery process are currently ongoing.
