

PREMIUM VERTICAL ACCESS

TAYLOR'S HOISTS HYBRID ACCESS | #OTH

TAYLOR'S HOISTS

BY BRAND)SAFWAY

An Enviably UK Hoist Fleet.

Taylor's Hoists by BrandSafway has one of the largest, most eco-friendly, safe and reliable fleets of hoists in the UK construction industry – including the UK's largest hoist, the Mammoth. No job is too difficult.

Taylor's Hoists by BrandSafway is a vertical access business invested in our Tier 1 clients and the premier projects they deliver across the UK.

We are involved in some of the UK's most impressive recent construction projects – including Manchester Town Hall, Co-Op Live and 8 Bishopsgate in central London.

Construction clients tend to engage us early on in their projects – to get working, viable engineering and design solutions to the problems they face. They tap into our vast mechanical access knowledge and the depth of our own 'complex capable' in-house design team and the 300-strong BrandSafway group of expert engineers.

This early engagement process tends to lead to our clients' complex projects being delivered on time & on budget.

Only The Best

Our client base of high-end construction brands expect only the very best from us as a business and our vertical access solutions – which is why we chose and use only Alimak hoists.

We have a hoist solution for every application.

+ Alimak 650 passenger/goods hoists – the most environmental friendly option for hoists: 3.2m to 5m long.

+ Alimak XL – Taylor's Hoists has the largest fleet of this highly effective passenger/goods hoist, available 2m wide x 2.8m high internally & up to 5M long. The No. 1 choice for most of our Tier 1 clients on projects UK-wide.

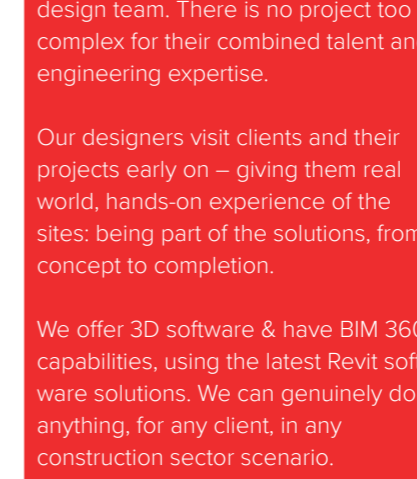

+ Alimak Mammoth – The largest construction hoist available to the UK construction sector, offering much

higher capacity, capable of taking up to four tonnes. It lives up to its name, at a massive 3.5 x 4.6m & 3m high.

+ Goods only combi machines – 1.4m wide & 2m to 4m long, ranging from 2.0-2.5 tonne capacity. These hard-grafting units are safe, durable and reliable machines, fit for purpose.

+ The latest TLP (launched in 2020), with a 500kg & 1000kg load capacity. These clever units are perfect for sites with tight space and for scaffolding and brick jobs. They are the ideal internal machine hoists for most projects – as they can be broken down into smaller components capable of being fitted through a standard width door.

Whatever the vertical access needs, Taylor's Hoists has the equipment for the job. And there's no job too difficult – we always find a way to make the access work, safely.

DESIGN DEPTH

Taylor's Hoists design engineering solutions are all provided from our in-house engineers – backed by the mighty, 300+ strong BrandSafway design team. There is no project too complex for their combined talent and engineering expertise.

Our designers visit clients and their projects early on – giving them real world, hands-on experience of the sites: being part of the solutions, from concept to completion.

We offer 3D software & have BIM 360 capabilities, using the latest Revit software solutions. We can genuinely do anything, for any client, in any construction sector scenario.

Big enough for a car | Mammoth by name...

Manchester Town Hall | No ties allowed

Problems become solutions.

We pride ourselves on being able to create solutions from our clients' access problems. Our premium products, engineering expertise and design know how enable us to find ways to provide intelligent vertical access – helping our clients run projects that end safely, on time & on budget.

NO TIES? NO PROBLEM.

CLIENT: Lendlease

PROJECT: Manchester Town Hall

PROBLEM: Twin hoist can not be tied to the Grade 1 Listed building, the Gothic masterpiece, Manchester Town Hall.

SOLUTION: Create a bespoke, in-house engineered steel structure to clamp around the building's historic clock tower, to allow the twin combination hoist to operate efficiently and safely.

Lyndon SGB's Mechanical Access Director, Paul Price said: "In 25+ years within the hoist industry, I have never before worked on a project with multiple hoists that have not been physically tied to the structure, and it's to the credit of the Taylor's Hoists team, Lyndon SGB and Lendlease teams that the solution became a reality."

Taylor's Hoists have provided nine out of the 10 hoists required on this flagship project, working closely with Lyndon SGB's scaffold team to provide a unique solution – where no external hoists are physically tied to the structure by penetration of any fixings.

The twin combination hoist is clamped around the Grade 1-listed Gothic clock tower, which was a concept and design that was developed between Lendlease and Taylor's Hoists and is just one example of the partnership that has been developed on this project.

Altogether, for the hoists currently on site there are more than 100 landings being served by the hoists and a total of 244m of mast sections. All the hoists are manufactured by leading industry supplier, Alimak, who also assisted with the design and making the unique access proposal possible.

CO-OP LIVE SOLUTIONS

CLIENT: BAM Construct UK

PROJECT: Manchester Arena Co-Op Live

PROBLEM: No support available in centre of site – where twin hoists are needed by the client to serve a Quik-Deck® suspended access deck.

SOLUTION: Work in collaboration with the crane sub-contractor to allow our twin hoist to be safely tied to the structure of the crane. Taylor's Hoists Branch Manager Lisa Price said: "This is one of those solutions that you can't believe can be possible, but our experienced and talented engineering team have made the vision a reality – achieving safe vertical access as desired by the client on this landmark project."

Service & maintenance.

No-one puts more effort, care and attention into preparing their construction equipment than the team of Taylor's Hoists mechanics. Each machine is fully prepped so it is like a brand new unit before going out on its next project. And our fast response on-site maintenance crew fix any (rare) issues quickly.

PART OF SOMETHING BIG IN THE USA & UK

Taylor's Hoists by BrandSafway is part of one of the world's leading access provision brands – BrandSafway.

Here in the UK, our operation is a slick cog in the well oiled Lyndon SGB by BrandSafway machine – the UK's largest commercial and infrastructure scaffolding and access provider.

Working together, Lyndon SGB and Taylor's Hoists offer nationwide "hybrid access solutions" – specifically: scaffolding, QuikDeck® suspended access, rapid edge protection systems, hoists and our Mast Climbing Work Platforms (MASCIMBERS™) division.

This "one stop shop" for access solutions – with in-house design included – is extremely popular with our Tier 1 construction company clients; boosting safety and productivity.

It is no wonder that together, we are working on the UK's premier projects.

The success of our hoists on-site starts with the quality of the preparation at our depots in Duxford in rural Cambridgeshire (serving London and the SE) and Crabtree, Manchester (serving the North West and Scotland).

And we leave no stone unturned.

Prior to each project, each and every Taylor's Hoists machine is fully stripped down, cleaned (in our eco-friendly wash bay, which recycles water), greased up, re-wired, fully serviced, tested and perfectly prepped before it goes off for use on-site.

The team of full-time Taylor's Hoists workshop staff do a fantastic job on every unit – servicing hoists into top quality condition, so they look and operate like new, fresh for each project.

Every motor deck is stripped down and fully rebuilt, the brakes are tested and machine serviced, the unit is greased and all the mast sections and ancillary equipment are overhauled – in advance of any hire out.

Then the hoist is all stripped back, sanded down and freshly painted – in Taylor's Hoists signature orange of course – with a new floor section installed.

Finally, it is onto the Taylor's Hoists test tower, for a full test for functionality and reliability. Only then will it be safely transported to site to start its life of reliable vertical access for our clients.

All Taylor's Hoists machines are fully modular – goods & passenger – so can go from a 3.2 to 5m, with extensions. Gates can be fitted on the cage.

And maintenance doesn't just stop at the depot. It's part of our on-site service provision too – making sure our units are operating perfectly for our clients 24:7:365, wherever they are in the UK.

Maintenance quality and the speed of our mechanical engineering team to react – enabling us to keep our clients' machines running smoothly on site – is one of the many things we pride ourselves on at Taylor's Hoists.

We have a team of mechanics able to respond extremely quickly to any (rare) issues with our eco-friendly, reliable fleet of premium construction hoists.

The team use motorbikes and/or public transport to enable as quick a response to issues as possible, not getting stuck in traffic en route – getting clients' machines operating smoothly on-site in no time.

And with fully trained operators running our machines safely on-site and reporting any issues to our site management team and back to the office, we guarantee a slick, simple and safe mechanical access operation.

It's this attention to detail that has led to 15+ years of success at the top of the hoist industry, a Construction Enquirer Top 100 sub-contractor award, multiple main contractor safety awards and lots of repeat business from our happy Tier 1 construction clients.

Make this the year you get to know our mechanical access team – reach out to the Taylor's Hoists by BrandSafway team and let us take the issues of vertical and mechanical access away from your schedules, to help you hit your project targets.
